Findings Aston Villa W

Clustering results

For all of k = 2, k = 3, and k = 4, Aston Villa W was safely clustered with patient teams.

Like its cluster

They stand out for less progressive passes per game, while less progression is done via passing. Their directness per shot-ending possession was less than average, while they were more patient in building up towards shots. They had less box entries via passing, they were less aggresive with counterpress actions on opposition half, and they shot less off transitions.

Unlike its cluster

They carry less forward and less progressive than average, while their defensive actions stayed at average height.

Pitch profile

Most of their final third entries and touches were on wide areas, with roughly similar share between left and right flank. Only a fifth of their attacks went through the middle.

Formations and typical XI

Aston Villa mainly rotated between 4-3-3 and 4-2-3-1 formation, while in 20% of the time they used back 3 formations and in 15% of the time they used wingerless formations, with 3-5-2 being the third most used formation.

For their main formation 4-3-3, right winger was the only position that saw significant rotation between Adrianna Leon and Alisha Lehmann. For other positions, a player covers at least two thirds of the minutes.

Similar teams

Most similar teams to Aston Villa on both squad and style include Juventus (Serie A Women), Atletico Madrid (Liga F). Five closest teams on style to Aston Villa were all teams outside the FA Women's Super League.
